

The Evergreen of enclosure technology

Standard enclosures made of aluminium, polycarbonate, ABS and polyester

Our service for your Smart Factory

BERNSTEIN AG, headquartered on the banks of the River Weser in Porta Westfalica, Germany - the "Westfälische Pforte" (Westphalian Gate) between the Weser and the Wiehengebirge mountains – can look back on an eventful past that is directly linked to Germany's most recent history. It was here, in 1947, that Hans Bernstein founded the "Hans Bernstein Spezialfabrik für Schaltkontakte", company from which BERNSTEIN AG emerged. The family owned company is now in the hands of the third generation, operates internationally, and employs more than 500 people in 10 countries.

In-depth market knowledge, at close proximity to end users, and years of experience in mechanical engineering and electronics are reflected down to the last detail in our products. Against this backdrop, BERNSTEIN ranks among the world's leading providers of industrial safety and enclosure technology. With our comprehensive range of switches, sensors, enclosures and operator terminals and suspension systems, we offer our customers effective and versatile solutions. And by conforming to international safety and machine guidelines, our products can be integrated perfectly into individual system solutions.

The evolution of the market is creating new driving forces that is leading to continuous and innovative development. Bernstein meets these changing needs through the provision of superior technical expertise, excellent market knowledge and customer relationships built on trust. Customer Satisfaction is our number one priority. For us, Quality is more than simply making a good product: it's about designing it to perfectly match all your needs.

Technically innovative. Personally specific. **Individually special – just like you.**

Customized Solutions are fully integrated into our business and form part of our everyday working life. Employees are treated as our greatest asset as they are responsible for the quality and success of our products. All BERNSTEIN TEAM members are trained and educated to the highest possible standard so that they can deliver "Best in Class" Service and Support. The BERNSTEIN TEAM will always support you both personally and professionally. Working together we will provide you with the best Safe Solution – for any size of project.

3

Our evergreen enclosure technology

Terminal box, enclosure or connection box? Standard enclosures have many different names and meanings to our customers. Enclosures can contain electrical, electronic, pneumatic, control devices and many other items that require protecting from harsh environments. Whether it be in aluminium, polyester, polycarbonate or ABS, BERNSTEIN has the right solution for you.

Thanks to different materials, the different enclosure types offer economical solutions for every wish, every requirement and every industrial environment.

Personally special. Individually special. Technically innovative.

— as well as the requirements of our customers. These are the strengths of our "Evergreen".

Including; machining, finishing, pre-assembly of rails, terminals, assembly, to a complete wired solution, BERNSTEIN can satisfy your every need.

Your idea -Our solution.

OUR ADDED VALUE SERVICES

You know BERNSTEIN as a supplier of innovative and reliable enclosure products. But we can offer you even

Benefit from the economic advantage of BERNSTEIN: Because we support you with a complete enclosure solution, fully machined, wired, assembled and individually coated.

Customer-specific developments

Standard enclosures

BERNSTEIN

Customized solutions

YOUR ADVANTAGES

- Shortened assembly time
- No coordination of external assembly service provider required
- Labour savings thanks to using assembled products from one supplier
- Simplified logistics chain
- Reduced inventory and overheads

Standard enclosures **Machining examples**

As a solutions specialist, BERNSTEIN has core competencies in mechanical engineering. Coupled with an extensive ultra-modern machining and Powder-coating facility, this means that BERNSTEIN can deliver any solution to meet your exacting needs. Whether it's CNC machining, pre-treatment or specialised finishes, we have the right solution for you.

We are not only a solutions provider, we are also the right partner to assist in your design process. With our in-house design team, we can advise on simple things like colours, printing etc., or even assist in the design and production of bespoke enclosure solutions.

BERNSTEIN's customer service offering

- Customisation of standard products according to your wishes
- A finished pr oduct from a "one stop" solution

Electrical conductivity (20 °C)		m/Ohm mm ²	15 – 22			

Standard enclosures **Assembly**

INVENTED BY BERNSTEIN

QUICK-RELEASE FASTENER AND FLEXIBLE, INTERNAL ARTICULATED HINGE

- Fixing the cover:
 CT (polycarbonate and ABS) standard with quick-release fastener,
 optionally available for CA (aluminium)
- · Time and cost reductions
- Easy to use
- Easy opening and closing (press and turn 90°)
- Easy closure test (recognisable without mechanical test)
- High safety:
 The quick-release fastener is under tension and engages.

 No opening of the cover in the event of vibrations.
- Easy to assemble (easy mounting or retrofitting possible due to self-retaining and detent)

THE QUICK-RELEASE INTERNAL HINGE

The flexible inner joints can be easily mounted in the enclosures without mechanical processing and hold the enclosure cover after opening.

This prevents both strain relief and loss of the cover.

For CT (polycarbonate and ABS)

CLOSING THE COVER

- Fixing the cover:
 CA (aluminium) and CP (polyester) with screws as standard, optionally available for CT
- The cover screws of the enclosures are made of stainless steel and thanks to the integrated self-retaining system are protected against loss.

Note, the self-retaining screw must first be turned/screwed through the cover, not pressed in!

SCREW CONNECTION WITH THE BACKGROUND

• Mounting by screw channel

Details to the assembly can be found on www.bernstein.eu/produkte/gehaeusetechnik

Standard enclosures Series CA (Aluminium)

CA enclosures from BERNSTEIN are made of aluminium alloys with copper, silicon, iron and manganese. These elements produce various different properties of the enclosure material. For example, by using copper, the strength is increased while silicon promotes corrosion resistance. Iron ensures a higher conductivity, which is a great advantage especially in the electrical sector.

Further positive properties of aluminium alloys are temperature resistance, good thermal conductivity, very good shielding properties and good coating possibilities.

The BERNSTEIN CA series enclosures are manufactured by die casting. As standard, the aluminium enclosures are powder-coated in RAL 7001 in our in-house powder coating plant. However, should a customer make a special request, the colours of the RAL table and powder coatings are available for applications with increased requirements.

BERNSTEIN CA enclosures are supplied with a polyurethane seal in the cover. Alternative seals are available for special applications in high temperature ranges and those involving chemical contact.

There are earthing screws in the cover and lower part to accommodate protective conductors.

The cover screws of the enclosures are made of stainless steel and cannot be lost thanks to a self-locking mechanism integrated in the cover.

The fixing bars or earthing sockets in the enclosure must be used for mounting and fastening built-in components.

Further versions of the BERNSTEIN CA enclosure are, for example, cULus- and Ex-U-certified enclosures.

Exe- and Exi-enclosures with ATEX/IECEx approval are also possible according to customer specifications.

Standard enclosures

Series CT (Polycarbonate and ABS)

The BERNSTEIN CT series enclosures are made of ABS and polycarbonate (PC), are thermoplastics and are manufactured by injection moulding. The plastic ABS is characterized by low weight, high impact strength, scratch resistance, chemical resistance and good insulation properties. Polycarbonate has higher strength, stiffness than ABS and good insulating properties. The enclosures of the CT series are particularly suitable for encapsulating electrical and electronic components as well as complete small controllers.

All enclosures are also available with a transparent polycarbonate cover. As standard, the enclosures are supplied with a PUR seal in the cover to ensure compliance with the degree of protection.

The plastic enclosures at the bottom of the lower parts are equipped with fastening cams for fastening built-in components. With the enclosed self-tapping fixing screws, fixtures can be attached easily and flexibly.

As standard, the BERNSTEIN CT series enclosures are supplied with the quick-release fastener developed and patented by BERNSTEIN. The enclosed quick-release fastener can be simply pressed into the cover and it then holds itself in place. It is made of stainless steel.

BERNSTEIN plastic enclosures made of polycarbonate and ABS are manufactured in RAL 7035 (light grey) as standard. It is, of course, possible to colour the enclosures to customer specifications in the colours of the RAL table.

The polycarbonate enclosures from BERNSTEIN can be ordered in a cULus version.

Standard enclosures Series CP (Polyester)

The CP series group of plastic enclosures consists of unsaturated polyester resins with glass fibre reinforcement. These are processed by pressing. Unsaturated polyester resins with glass fibre reinforcement have a mechanical strength in the range of unalloyed steels. In addition, the typical shrinkage and creep tendency of plastics is reduced by the glass fibres. Polyester resins have good electrical properties and good dielectric behaviour.

Polyester enclosures are therefore particularly suitable for accommodating and encapsulating electrical and electronic components and control components in harsh environmental conditions or hazardous areas.

As standard, the CP enclosures are supplied with a PUR seal fitted in the cover. For applications in technically demanding areas with temperature changes and chemical contact, BERNSTEIN also offers CP enclosures with alternative sealing materials.

The inserted cover screws are made of stainless steel and can not be lost thanks to a self-locking mechanism integrated in the cover. Depending on their size, BERNSTEIN polyester enclosures have mounting options in M4 or M6 in the lower part. The mounting sockets are pressed into a web on the narrow sides inside the base and are used to accommodate mounting plates, mounting rails, printed circuit boards, etc.

The polyester enclosures are available in grey (RAL 7001, silver grey) or black (RAL 9005, deep black) as standard. For larger quantities, it is possible to colour or coat the plastic enclosures according to the customer's requirements

The enclosures of the CP series are also available as cULus and EX-U versions.

Exe- and Exi enclosures with ATEX/IECEx approval are also possible according to customer specifications.

Manufacturing standards

Technical information on enclosure machining

As an ISO-9001-2008-certified company, BERNSTEIN has defined a manufacturing standard that applies to the processing orders it receives if there are no further agreements.

Dimension tolerances

- When preparing details for enclosure machining (see the following drawings, showing the enclosure orientation when set up for machining), the tolerances used for the first machining operation on each set up, are according to ISO 2768-mH
- Tolerances between further machining operations can be limited to ±0.1 mm compared to each other

General tolerances for unmachined parts – Standard range

Material / Enclosure type	General tolerance
CA-020 to CA-480	
Cast aluminium	DIN 1688 GTA 13/5
CT-50 to CT-91	
PC/ABS	DIN 16901
CP-140 to CP-460	
Polyester-mats	DIN 16901

Minimum purchase quantities

In order to keep enclosure machining as cost-effective for the user as possible, the following minimum purchase quantities are suggested:

Description	Quantity
CA-020 CA-080	20 pieces
CA-100 CA-190	10 pieces
CA-210 CA-310	10 pieces
CA-330 CA-480	5 pieces
CP-140 CP-195	20 pieces
CP-220 CP-320	10 pieces
CP-330 CP-460	5 pieces
CT-50 CT-76	20 pieces
CT-78 CT-89	10 pieces

These quantities should be regarded as the minimum, if the customised enclosures are to be produced economically. Production includes mechanical machining, special coating, screen-printing, engraving or assembly of accessories. Of course, BERNSTEIN would always be pleased to advise you.

Standard enclosures Accessories Overview

BERNSTEIN offers a complete placement service up to system solutions. BERNSTEIN can organise all the necessary components for you. A selection of the most common accessories is listed below.

The graphic above shows at a glance which components are available for the respective enclosures.

Example: **CP** (to be read clockwise around the shaded ring):

External mounting brackets, earthing bars, locks, terminal blocks, NO press-in bushes, sealing screws, cable glands, internal articulated hinges, external articulated hinges, seals, mounting plates, mounting rails.

Notes

Diagrams. Sketches. Ideas.

CA-Enclosures (Aluminium)

Details of the assembly components

Mounting plates

- Made from galvanised steel plate (thickness: CA-060 to CA-310, CA-350 to CA-400: 1.5 mm; CA-330, CA-420 to CA-480: 2.5 mm)
- For versatile mounting of built-in components

Mounting rails

Conforming to Standards TS 15 or TS 32 and TS 35 and made from steel;
 surface treated for accepting terminal blocks

Earthing bars

• Made from galvanised steel for combining and connecting PE conductors

External mounting brackets

- Made from stainless steel for mounting enclosures without opening the covers
- Variable mounting in 90°-steps thanks to contours in the enclosure base

Terminal blocks

• Terminals of all well-known manufacturers can be offered mounted according to the application

Sealing screw

• Use of a sealing screw to protect the cover against unauthorized access

External articulated hinges

- For hinged mounting of the enclosure cover
- Opening range of cover approx. 155°
- Cast aluminium (painted in RAL 7001 specific colours possible according to the enclosure specification)
- Machining is required for mounting on enclosures

Internal articulated hinges

- For hinged mounting of the enclosure cover
- Opening range of cover approx. 95°
- Stainless steel
- Machining is required for mounting on enclosures

Silicon-, EPDM-, CR- or HF seal

- With increased temperature resistance (see indications on left side) or to protect sensitive electronic equipment against high-frequency radiation (HF seal)
- For a conductive connection, the grooves and springs of the enclosure must be left blank

Cable glands

- Plastic cable glands (polyamide PAG V-2, RAL 7001) or brass cable glands
- Sealing element CR/NBR, temperature range –20°C to +100°C
- · Other cable glands are available on demand

Lock

• Use a lock to protect the enclosure against unauthorized access

CT-Enclosures (Polycarbonate and ABS)

Details of the assembly components

Mounting rails

- Made from laminated paper (Pertinax) (thickness: CT-50 to CT-60 1.5 mm; CT-62 to CT-78 2.0 mm; CT-80 to CT-91 2.5 mm)
- For versatile mounting of built-in components

Mounting rails

 Conforming to standards TS15 or TS32 and TS 35, made from steel; surface treated for accepting terminal blocks

Earthing bars

• Made from galvanised steel for combining and connecting PE conductors

External mounting brackets

- Made from polycarbonate for mounting enclosures without opening the covers
- Different bracket arrangement options offset by 90°
- Colour RAL 7035

Terminal blocks

 Terminals of all well-known manufacturers can be offered mounted according to the application

Sealing screw

• Use of a sealing screw protects the cover against unauthorized access

External articulated hinges

- Made from polycarbonate for hinged mounting of the enclosure cover
- Opening range of cover approx. 195°, latching at 170°, articulated hinges are simply pressed into holes (CT-88: secured by screws)

Flexible quick-release fastener/internal articulated hinges

- For captive mounting and strain relief for the enclosure cover
- Cover opening range >180°
- Stainless steel with injection-moulded polyamide ends

Silicon-, EPDM-, CR- or HF seal

• With increased temperature resistance (see indications on left side) or to protect sensitive electronic equipment against high-frequency radiation (HF seal)

 If a HF seal is used, an additional coating of the inside of the enclosure is required

Cable glands

- Plastic cable glands (polyamide 6, RAL 7035) including integrated strain relief
- Sealing element Neoprene, temperature range -20°C to +100°C
- · Other cable glands are available on demand

Brass press-in bushes

 With metric fastening screws M3 (M4 on CT-88), for mounting built-in components with metric screws in the mounting bushes in the enclosure body

CT-Enclosures (Polycarbonate)

CP-Enclosures (Polyester)

Details of the assembly components

Mounting plates

- Made from galvanised steel plate or laminated paper (thickness: CP-140 to CP-195 laminated paper 1.5 mm; CP-220 to CP-320 and CP-370 to CP-460 steel plate 1.5 mm; CP-330 steel plate 2.5 mm)
- For versatile mounting of built-in components

Mounting rails

Conforming to Standards TS 15 or TS 32 and TS 35, made from steel;
 surface treated for accepting terminal blocks

Earthing bars

• Made from galvanised steel for combining and connecting PE conductors

External mounting brackets

- Made from metal for mounting enclosures without opening the covers
- The brackets are always fitted across the shorter sides of the enclosure

Terminal blocks

• Terminals of all well-known manufacturers can be offered mounted according to the application

Sealing screw

• Use of a sealing screw protects the cover against unauthorized access

External articulated hinges

- For hinged mounting of the enclosure cover
- Opening range of cover approx. 155°
- Cast aluminium (painted in RAL 7001 specific colours possible according to enclosure specification)
- Machining is required for mounting on enclosures

Internal articulated hinges

- · For hinged mounting of enclosure cover
- Opening range of cover approx. 95°
- Stainless steel
- Machining is required for mounting on enclosures

Silicon-, EPDM-, CR- or HF seal

• With increased temperature resistance (see indications on left side) or to protect sensitive electronic equipment against high-frequency radiation (HF seal)

 If a HF seal is used, an additional coating of the inside of the enclosure is required

Cable glands

- Plastic cable glands (polyamide PAG V-2, RAL 7001)
- Sealing element CR/NBR
- Temperature range –20°C to +100°C
- · Other cable glands are available on demand

Lock

• Use a lock to protect the enclosure against unauthorized access

BERNSTEIN Your partner for explosion protection

OUR PROMISE TO YOU

- The right product for your application
- · Professional technical advice
- · Engineering and project management from one provider
- · Continuously monitored quality system
- Customer specific developments and approvals
- The right contact for all matters concerning explosion protection and machinery safety
- Product and professional trainings for Ex applications
- Specialists who always have the latest know-how from internal and external basic and further training courses

Ex competence

for potentially explosive areas

TERMINAL ENCLOSURES AND EMPTY ENCLOSURES

Only materials that correspond to the temperature range required for Ex enclosures are used in these enclosures and components. The minimum type of protection rating of all enclosures and screw connections is IP64, other protection classes available on request. The latching devices on the enclosures are available as captive screw connections. Various CA versions are available with flange plates. All built-in components must conform to the relevant approvals.

EX-APPROVED PRODUCTS FOR POTENTIALLY EXPLOSIVE ATMOSPHERES

- Ex e, Ex ia and Ex e / ia terminal boxes made from polyester and aluminium
- Ex d / Ex tb limit switches, rope pull switches and foot switches
- Ex mb / Ex tb magnetic switches
- Ex ib inductive namur sensors

OUR EX-EXPERTS' SERVICES:

- Approvals assistance for plant operators
- · Approval of switching and control elements in all enclosures
- · Approval of plug-in devices in all enclosures
- Customised component mounting and wiring of enclosures
- Training courses for planners and plant operators
- Cross-product system solutions
- Customer-specific development and project management on request
- · Approval according to IEC Ex on request

Aluminium and polyester blank enclosures CA, CP, CPS

ATEX-U certified standard enclosures

BERNSTEIN enclosures have been tested by an internationally recognised and certified inspection authority and certified through type approval testing for use in areas with potentially explosive dust and gas atmospheres. Used as terminal and control enclosures, the aluminium pressure die-cast (CA) and glass-fibre reinforced polyester (CPG, CPS) enclosures are designed to accept corresponding mechanical and electrical equipment. The enclosures come with operating instructions, type identification plate and CE Declaration of Conformity. Either an EPDM or silicone seal can be used. The enclosures can be fitted at the factory with external hinges.

Technical Data

- Protection class IP66 to IEC 60529
- Ex-Identification
- (Ex eb IIC Gb
- Impact strength > 7 joules
- Operating temperature max. –55 °C to + 135 °C (special seal)
- Enclosure colour:

CA RAL 7001 (silver grey)

Powder-coating corrosion protection

CP/CPS RAL 7000 (squirrel grey) CP

RAL 9005 (jet black) CPS

- UV resistance
- Certificates:

CA IBEXU 16 ATEX 1130 U, IECEX IBE 15.0025U
CP/CPS IBEXU 16 ATEX 1197 U, IECEX IBE 16.0036U

Aluminium and Polyester Terminal enclosures

DThe Ex standard enclosures of the CA and CP series are designed as fully machined and assembled connection and wiring enclosures for use in zones 1, 2, 21 and 22. They are machined and assembled according to the customer's needs and wishes. A combination of terminals and cable glands of various manufacturers is possible.

All common connecting terminals and cable glands can be combined.

- Screw terminals
- Direct push in terminals
- Wire piercing clamps
- Quick connect push terminals
- Single screw-type metal or plastic glands
- Multiple screw-type metal or plastic glands
- Special screw type glands for ribbon cables
- Certificates:

CA IBEXU 16 ATEX 1131, IECEX IBE 15.0029
CP/CPS IBEXU 16 ATEX 1198 X, IECEX IBE 16.0037X

The enclosures are designed in "enhanced safety" and "intrinsic safety" protection types or a combination of both.

A protection type up to IP66 in accordance with ISO 60529 is possible depending on the seal. The operating temperature ranges from -55 °C to +130 °C depending on the version.

All sizes of the blank enclosures are available as assembled enclosures. Either an earthing rail or an earthing clamp is used as an earth connection.

Accessories

Cable glands, plastic M12-M63

- Temperature range -20 °C to +80 °C, PA6
- IP66/68, Ex e and Ex i

Cable glands, metal M12-M63

- Temperature range -30 °C to +90 °C, MS
- IP66/68, Ex e

Screw terminals

- TS15 (Standard), TS35 (Standard)
- MUT 2.5
- UT 2.5

Mounting plates

- Made from galvanised steel plate or laminated paper
- As from CP-370/CA
- Up to CP-320

External mounting brackets

- For mounting without opening the covers
- Stainless steal

Mounting rails

- TS-15 or TS-35
- As from CA-210/CP-220
- Up to CA-190/CP-195

Earthing bars

- As option to PE terminals
- Solid earthing brass nickel-plated
- As from CA-210/CP-220

Monitor enclosures

for zone 2/22

To enable the use of controllers and operating units in explosive areas of zones 2 and 22, monitor and controller enclosures of the CC-4000 series and the CA and CP series with customised assemblies can be used.

Zone 2

For operation in zone 2 (Gas 3G) the enclosures are designed to ensure explosion protection type Ex nA (non-sparking device) and/or Ex i (intrinsic safety). The basic preconditions for this are:

- Enclosure and suspension system protection class IP54
- All add-on and built-in parts with type examination certificates or CE declaration of conformity for zone 2

Zone 22

For operation in zone 22 (Dust 3D) the enclosures are designed to ensure explosion protection type to (protection by enclosure). The basic preconditions for this are:

- Enclosure and suspension system protection class IP6x
- All add-on parts with type examination certificates or rather CE declaration of conformity for zone 22
- The assembly of all externally accessible parts at BERNSTEIN AG
- Issuing of a manufacturer declaration/CE declaration of conformity for the complete enclosure
- Documentation and monitored production by ATEX-QA

Accessories, built-in and add-on parts

Parts of all renowned manufacturers are used. This include:

- Operator panel parts
- Terminals
- Touch panels
- Cable glands
- Power devices
- IPC Panels
- Signal lamps
- Alphanumeric displays

DEFINITION OF PROTECTION CLASSES

IN ACCORDANCE WITH DIN EN 60529, VDE 470 T 1

The protection class of an enclosed device denotes the degree of protection. The degree of protection includes the protection of persons against contact with parts under voltage and the protection of equipment against the infiltration of foreign bodies and water.

BERNSTEIN standard enclosures largely correspond to protection class IP67.

Foreign body protection

1. digit	Meaning	Explanation
IP0X	No protection	
IP1X	Protection against foreign bodies with a diameter of 50 mm or greater	Solid object (sphere, Ø 50 mm) must not fully penetrate
IP2X	Protection against foreign bodies with a diameter of 12.5 mm or greater	Solid object (sphere, Ø 12.5 mm) must not fully penetrate
IP3X	Protection against foreign bodies with a diameter of 2.5 mm or greater	Solid object (sphere, Ø 2.5 mm) must not fully penetrate
IP4X	Protection against foreign bodies with a diameter of 1 mm or greater	Solid object (sphere, Ø 1 mm) must not fully penetrate
IP5X	Protection against harmful dust deposits	Dust penetration is not completely prevented. However, the amount of penetration must not impair the function or safety of the device
IP6X	Protection against dust penetration, dustproof	No penetration of dust at a negative pressure of 20 mbar in the enclosure

Moisture protection

2. digit	Meaning	Explanation
IPX0	No protection	
IPX1	Protection against dripping water	Vertically falling droplets must not have a damaging effect
IPX2	Protection against dripping water when the enclosure is tilted at an angle of up to 15°	Vertically falling droplets must not have a damaging effect when the enclosure is tilted at an angle of up to 15° either side of the perpendicular
IPX3	Protection against spray water	Water splashed at an angle of up to 60° either side of the perpendicular must not have a damaging effect
IPX4	Protection against splash water	Water sprayed against the enclosure from any direction must not have a damaging effect
IPX5	Protection against hose water	Water sprayed in jet form against the enclosure from any direction must not have a damaging effect
IPX6	Protection against strong hose water	Water sprayed in a strong jet form against the enclosure from any direction must not have a damaging effect
IPX7	Protection against the effect when temporarily submerged in water	Water must not enter in harmful quantities when the enclosure is submerged under standardised pressure and time conditions
IPX8	Protection against the effects of continuous immersion in water	Water may not ingress in a volume that would cause harmful effects when the shell is continuously submerged in water under conditions agreed between manufacturer and user . The conditions must, however, be more difficult than those for code number IPX7.
IPX9K	Protection against water during high pressure/steam jet cleaning (as per DIN EN 40050, Part 9)	Water sprayed at greatly increased pressure against the enclosure from any direction must not have a damaging effect

DEFINITION OF THE PROTECTION CLASS

- Degrees of protection against external mechanical stress provided by enclosures for electrical equipment (equipment) (IK code)
- The IK code is internationally standardised according to IEC 62262 (refers to EN 50102)
- There are ten codes corresponding to the impact energy [Joule] assigned

IK-Code	[W] in J	IK-Code	[W] in J	
IK00	no protection	IK06	1	500 g
IK01	0.14	IK07	2	500 g
IK02	0.2	IK08	5	1,7 kg
IK03	0.35	IK09	10	5 kg
IK04	0.5	IK10	20	5 kg 40 cm
IK05	0.7

As a supplier of enclosures, BERNSTEIN inevitably works at the interface between the resulting and received interference or radiation. According to the definition, enclosures are not electrical or electronic devices that are disturbed or can themselves be disturbed by HF radiation (EMC Directive 2014/30/EU of the European Parliament). However, for many applications, enclosures are required to protect electronics from external influences. Enclosures in the appropriate design are therefore also of decisive importance for interference emission or the immunity of devices.

How are enclosures designed according to EMC?

Choice of materials

Conductive enclosure materials are, of course, optimal shielding materials in the first instance. The BERNSTEIN aluminum enclosures of the CA series are therefore ideal for shielding electrical and electronic equipment. Plastic enclosures can be made HF-tight by coating them with conductive materials. Also here BERNSTEIN offers a corresponding solution. Both the thermoplastic enclosures of the CT series, made of polycarbonate and ABS as well as the polyester enclosures are internally coated with aluminum.

Interface cover / bottom

The IP protection class is ensured by the NUT spring system, which is provided with a seal. In order to make the enclosure insensitive to electromagnetic waves, an HF/ EMC gasket can be used which, depending on the requirements, can be made of a silicone gasket with an appropriate silver coating.

Fire classification tests are carried out to investigate the burning properties and thus the fire safety of plastics.

Flammability UL 94 HB

A test for testing the horizontal burning behaviour. A standardised plastic sample is clamped horizontally. A torch is then used to flame the sample for 30 seconds. The resulting burning time of the plastic is measured and a conclusion is made about the flammability.

Flammability UL 94 V

A test for testing the vertical burning behaviour of plastic samples. The sample is fixed vertically and then flamed with the burner for 2x10 seconds. The plastic specimens are classified according to whether the specimen is subject to burning or dripping.

Flammability class UL 94

	V-0	V-1	V-2
Afterburning time after flame treatment (S)	≤ 10	≤ 30	≤ 30
Sum of all afterburning times (S) (10 flame treatments)	≤ 50	≤ 250	≤ 250
Afterburning and afterglowing of the samples after the second flame treatment (S)	≤ 30	≤ 60	≤ 60
Burning dripping	no	no	yes
Complete burning of the samples	no	no	no

BERNSTEIN enclosures have been classified as ABS UL 94 HB, PC UL 94 V2 and UP (unsaturated polyester resins) UL 94 V0.

CORROSION RESISTANCE

For better protection, BERNSTEIN offers CA enclosures with a special powder coating for applications with increased requirements. The salt content of the air and high humidity accelerate the corrosion behaviour of some materials. In accordance with the product standard DIN EN 62208, to which BERNSTEIN adheres, the resistance of the materials is tested with a salt spray test in a corrosive atmosphere. During the test the corrosive changes to the metallic enclosure material and the coating are investigated by cyclically applied loads using salt solutions and moist warm air.

We would be pleased to provide you with further information personally.

HALOGEN FREE

Halogens are a group of 6 chemical elements, whereby only the elements fluorine, chlorine and bromine are relevant for applications in electronic fields. Halogens are used as flame retardants in some plastics. However, in the event of fire, these elements may form corrosive and toxic compounds. As a result, interest in halogen-free products is growing steadily. BERNSTEIN uses halogen-free enclosure materials for the plastic enclosures of the CT and CP product families. The PUR seal used as standard at BERNSTEIN also contains no halogens.

UV RADIATION

Ultraviolet radiation covers the wavelength range from 100nm to 400nm and is the most energetic part of optical radiation. UV radiation is neither visible nor perceptible to humans. Due to the energy wealth of UV radiation, free radicals are formed in the plastic. The atmospheric oxygen binds with these radicals and the polymer oxidizes. However, in order to prevent oxidation in the CA series, BERNSTEIN's in-house coating system applies a special powder coating. The enclosures of the CP series are the preferred choice for applications with increased requirements.

MECHANICAL STRENGTH

For applications requiring increased strength, BERNSTEIN offers its range of CA and CP series enclosures. The mechanical strength of a material describes how much mechanical stress a material can withstand until it fails. A distinction is made between elastic deformation, plastic deformation, and fracture. Specific characteristics of mechanical strength are, for example, tensile strength, flexural strength, notched impact strength and compressive strength.
